How does **NANOMAN**
Wheel & Rim Coating Work?

After application nano particles self organise themselves to form an invisible coating and bond with the surface.

The nano coating is only a few nanometres thin and cannot be seen with the naked eye.

The wheel rim becomes super hydrophobic with rain and water beading and rolling off the surface taking away with it brake dust, dirt, grime and other contaminants.

How does **NANOMAN** Wheel & Rim Coating Work?

![Nano Layer](image)

Dirt and brake dust will not gain purchase on the rim surface meaning it will self clean or remain easy to remove.

What is Nanotechnology

Nanotechnology is rapidly becoming the Industrial Revolution of the 21st century. It has the potential to benefit every aspect of life, from medicine to computing, to the food we eat, the cars we drive and the clothes we wear.

It’s small...really, really small!

In fact nanotechnology deals with materials at the molecular level. They can’t be seen or felt, but can now be engineered to harness their natural features on a larger scale for an amazing range of uses.

Other **NANOMAN** Products

Glass and Ceramic Coating
Timber Coatings
Stainless Steel & Metal Coatings
Automotive Windscreen Coatings
Anti corrosion, water repellent sprays
Stone, concrete and tile coatings
Fabric & Textile Coatings

Repels brake dust, road grime and dirt by forming a protective coating on your wheels/rim
Nanoman Wheel & Rim Coating

Nanoman Wheel & Rim is a nanotechnology coating designed to protect your rims and keep them looking like new.

It forms a tough ultra thin invisible barrier on the rim providing excellent protection against brake dust and its corrosive effects.

The coating is also super hydrophobic which causes water to bead up and roll off the surface. This water beading picks up and carries away fresh surface contaminants including brake dust.

This self-cleaning effect helps to make routine cleaning easier as it stops brake dust bonding with the surface.

So save yourself time, money and backache, a simple wipe with a damp cloth is all you need to keep your wheels clean.

Nanoman’s properties come from nature’s lotus leaf. Lotus leaves have nano-sized hairs that do not allow water molecules to adhere to their surface, resulting in water droplet formation, which simply slide off taking dirt and contaminants with them.

Similar effects are achieved by coating Nanoman on car wheels and rims.

Benefits of Nanoman Wheel & Rim Coating

- Keep your Steel / Alloy / Chrome wheels looking like new
- No visual change to the surface
- Reduces brake dust and dirt particle adhesion
- Protection against weathering and corrosion
- Simplifies the cleaning of alloy and chrome rims
- Brake dust can be removed easily and does not burn in or stain.
- Saves time and money on cleaning agents
- Dirt can simply be removed with a damp cloth
- Easy to apply and use

Avoid Brake Dust Build Up
