How does it work?

After application nano particles self organise themselves to form an impregnable bond with the fabric and material with incredible hydrophobic and anti adhesion properties.

The nano coating is invisible to the naked eye and will not effect the colour, breathability or feel of the fabric.

Dirt and other contaminants cannot adhere to the fabric and liquids will simply run off and not be absorbed into the fibres of the coated fabric.

Stains and water marks will become a thing of the past and your fabric surfaces will remain looking like new for much longer.

What is Nanotechnology

Nanotechnology is rapidly becoming the Industrial Revolution of the 21st century. It has the potential to benefit every aspect of life, from medicine to computing, to the food we eat, the cars we drive and the clothes we wear.

It’s small...really, really small!

In fact nanotechnology deals with materials at the molecular level. They can’t be seen or felt, but can now be engineered to harness their natural features on a larger scale for an amazing range of uses.

Other Products

Glass and Ceramic Coating
Timber Coatings
Stainless Steel & Metal Coatings
Automotive Windscreen Coatings
Anti Corrosion, Water Repellent Sprays
Brick, Concrete, Stone and Tile Coatings
Solar Panel Coating
Nanoman Textile and Fabric Coating is at the cutting edge of surface protection. It is an innovative fabric protection spray that uses nano sized particles to coat each fibre of the material being treated.

It can be applied to all your fabric furnishings including sofas, chairs, table clothes and bed coverings without affecting the look or feel of them.

Water and other liquids including coffee, wine and sticky soft drinks will simply bead on fabric surfaces and can be removed with a paper towel or cloth leaving no staining.

Nanoman is water based, harmless to the skin, environmentally friendly, and contains no fluoropolymers or alcohol.

It simply has to be seen to be believed!

Nanoman’s properties come from nature’s lotus leaf. Lotus leaves have nano-sized hairs that do not allow water molecules to adhere to their surface, resulting in water droplet formation, which simply slide off.

Similar effects are achieved by coating Nanoman on your clothes.

Benefits of Nanoman:

- Quick and easy to use
- Does not affect look or feel of fabrics
- Suitable for all fabric types
- Prevents stains and soiling
- Water and liquids such as coffee, juice or soft drinks will not permeate into the surface
- Totally transparent
- Water based and harmless to your skin
- Liquid repellent for all fabrics
- Ideal protection for all indoor or outdoor fabric and material surfaces

This new and advanced method of leather textile and fabric protection remains active for up to 12 months! Think of how much longer upholstery would look like new if they were resistant to water and stains.
